

British Columbia Population Projections 2009 to 2036

January 2009

British Columbia Population Forecast

Notes to the Tables

- All population and migration figures prior to 2006 are final intercensal population estimates prepared by Statistics Canada. Figures for 2007 onward are postcensal population estimates based on the 2006 Census (population adjusted for Net Census Undercount).
- The population figures reported in Tables 1-3 and 6-8 have been rounded to the nearest thousand. Sex ratios, per cent distributions and growth rates were calculated with unrounded numbers.
- The reference date for the population figures given in Tables 1, and 3-12, is July 1 of the year stated.
- The components of population change given in Table 2 cover the period from July 1 to June 30 of the following year.
- The estimated sum of the components of population change given in Table 2 for the years prior to 2001 may not equal the difference in population derived from Table 1. This is due to the fact that after a census, Statistics Canada will revise the intercensal population estimates in accordance with the census results, adjusted for net undercount. However, the components of population change are not revised in the same manner.
- The Sex Ratios given in Tables 1 and 9 are defined as the number of males per 100 females.
- The Median Age referred to in Table 1 is defined as that age at which 50 per cent of the population is younger. Similarly, the median age at death is defined as that age below which 50 per cent of the deaths in any particular year occur.
- The TFR, or Total Fertility Rate, given in Table 1, is defined as the sum of the age specific fertility rates for females aged between 15 and 49. In effect, the TFR is equal to the total number of children 1,000 women would bear in their lifetime, or completed family size.
- Child Dependency referred to in Table 1 is defined as the population aged 0 to 17 divided by the population aged 18 to 64. Elderly Dependency is defined as the population aged 65 and over divided by the population aged 18 to 64. Total Dependency is simply the sum of the child and elderly dependency rates.
- Natural increase referred to in Table 2 is the difference between births and deaths.
- International in-migration referred to in Table 2 includes permanent **immigrants**, plus the net change in **non-permanent residents** (persons residing temporarily in Canada who hold a student, work, or minister's permit, or who are refugee claimants).
- International out-migration referred to in Table 2 includes permanent **emigrants**, plus the net change in persons **temporarily abroad** (residents who have temporarily moved to another country, but have the intention of returning to live in Canada), minus **returning emigrants** (residents who emigrated from Canada in the past, and who are returning with the intention of once again becoming permanent residents).

Estimated - Statistics Canada

Note: All figures are as of July 1st of the year stated | Median Age = The age at which half the population is younger and half is older
Child Dependency = Population of age 0 to 17 / Population of age 18 to 64 | Elderly Dependency = Population of age 65+ / Population of age 18 to 64
Total Dependency = The sum of Child Dependency and Elderly Dependency | Sex Ratio = Number of males per 100 females
Total Fertility Rate = Sum of the age specific birth rates over all ages of child bearing period (15-49)

Sources: Forecast - BC STATS, Forecast 09/01
Estimated - Statistics Canada

Note: All figures are as of July 1st of the year stated
Due to revisions on the part of Statistics Canada, the sum of the components may not equal the population change.

** International In-Migration includes Permanent Immigrants, plus the net change in Non-Permanent Residents (persons residing temporarily in Canada who hold a student, work, or minister's permit, or who are refugee claimants).

** International Out-Migration includes Permanent Emigrants, plus the Net Temporarily Abroad (Residents who have temporarily moved to another country, but have the intention of returning to live in Canada), minus Returning Emigrants (Residents who emigrated from Canada in the past, and who are returning with the intention of once again becoming permanent residents).

Table 3
British Columbia Population by Selected Age Groups
Estimated (1971-2008) and Forecasted (2009-2036)
