

Business Indicators ♦ September 2008

Housing Affordability in British Columbia

House Prices

According to the 2006 Census, British Columbia had among the highest median (single-detached) house values in the country, with 18 of its 26 urban centres in the top 50 of about 150 urban areas across Canada.¹ Indeed, 6 of the top 10 were in BC, with 3 in Alberta and one in Ontario. The most expensive housing was found in Canmore, Alberta (median value of \$538,901 for a single-detached house), with Vancouver not far behind (\$526,838). Victoria was third on the list (\$459,960), followed by Squamish (\$429,742). The only non-western urban centre to make the top 10 was Toronto (\$399,772).

The most affordable single-detached housing could be found in Quebec, Nova Scotia and New Brunswick, followed by Ontario, Saskatchewan and Newfoundland & Labrador.

¹ This analysis is based on the median value of a single-detached house. The “urban centres” are the Census Metropolitan Areas and the Census Agglomerations in Canada. See table 1 for a complete list. The median is the point at which exactly half of dwellings have higher values and half have lower values. This is different from the average (or arithmetic mean) which divides the total value of all dwellings by the number of dwellings. The average can be skewed by the presence of outliers (in this case, very expensive dwellings).

Montreal was the only Quebec urban centre to crack the top 50, and 23 of its 32 urban areas were in the bottom 50. The most affordable BC urban area was Kitimat (\$119,903), one of only two BC centres in the bottom 50 (Quesnel was the other, at \$129,693).

For Canada as a whole, the median value of a single-detached house was \$200,432. In British Columbia, 17 out of 26 urban centres were above the national median.

Median Value of a Single-Detached House, Least and Most Affordable (\$000), 2006

Housing Affordability

Households are considered to have affordability problems if more than 30 per cent

of the household income is spent on housing, raising the possibility that there may not be enough money left over for other necessities. Using this criterion, 29.1 per cent of BC households had affordability problems in 2006, up slightly from 28.6 per cent in 2001.

Renters were almost twice as likely as homeowners to have housing affordability problems. While 43.7 per cent of renters spent more than 30 per cent of their household income on shelter (down slightly from 44.1% in 2001), only 22.8 per cent of homeowners found themselves in the same situation. For homeowners, the presence of a mortgage made a significant difference. For those homeowners with a mortgage, 34.4 per cent (up from 32.2% in 2001) had affordability problems, while only 6.9 per cent (up from 6.3% in 2001) of those mortgage-free did so. Age also had a considerable impact, with nearly 60 per cent of renters either under 25 years of age or 75 years and older having the greatest challenge. Homeowners with mortgages in those age groups were also more likely to experience housing affordability problems, although those aged 65 and over without a mortgage were the least challenged.

Compared to the rest of Canada, British Columbia homeowners with mortgages had by far the highest percentage (34.4% - over one third) of households spending 30 per cent or more of their household income on shelter, with Ontario a distant second (29.5%). For Canada as a whole, about one quarter (25.7%) of owned households with mortgages were considered to have housing affordability problems.

For owned households without a mortgage, BC matched the national figure with 6.9 per cent of households spending 30 per cent or more of their household income on shelter.

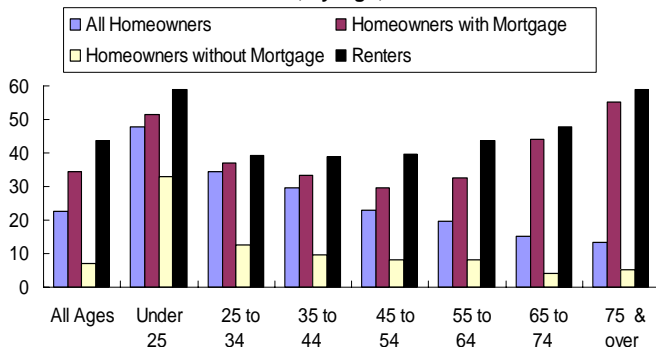

Renters in the province had the highest percentage (43.7%) of all households to experience housing affordability problems, but renters in Nova Scotia (45.1%) and Ontario (44.6%) had greater proportions of their households spending 30 per cent or more of their income on shelter.

Per cent of households spending 30% or more of household income on shelter, 2006

	Owned with mortgage	Owned without mortgage	Rented
Canada	25.7	6.9	40.3
Newfoundland & Labrador	19.9	6.4	42.8
Prince Edward Island	20.7	6.4	41.7
Nova Scotia	20.6	6.6	45.1

Household Income

While British Columbia had some of the highest housing costs in the country, the province's

median household income in 2005 (\$52,709) was below the Canadian average (\$53,634) and well below the provinces of Alberta (\$63,988) and Ontario (\$60,455). The Northwest Territories had the highest median household income (\$80,085) in the country with Nunavut (\$60,221) and the Yukon Territory (\$60,105) slightly behind the province of Ontario.

Regional Differences

There was considerable regional disparity within the province with respect to housing affordability. The highest shelter costs were in the region of Squamish-Lillooet, where the average owner’s payments were \$1,322 and the average gross rent was \$1,002 (the Resort Municipality of Whistler was largely responsible for the high shelter costs in this region). Other regions with high shelter costs were Greater Vancouver, Capital, Central Okanagan, Northern Rockies and Fraser Valley.

Average owner’s major payments were lowest in the regions of Central Coast, Powell River, Kootenay-Boundary, Central Kootenay and Cariboo, all under \$700 a month. Rents were lowest in the regions of Central Coast, Skeena-Queen Charlotte, Bulkley-Nechako, Kootenay-Boundary and Cariboo.

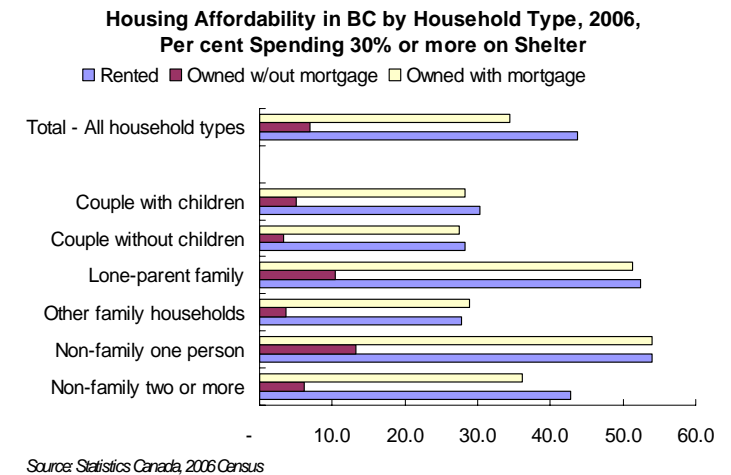

The median household income in the Squamish-Lillooet region was relatively high (\$56,360), with only the northern districts of Fraser Fort-George (\$61,011), Peace River (\$61,866) and Northern Rockies (\$77,732) having higher median household incomes in 2005. Other regions with incomes above the provincial median were Bulkley-Nechako, Greater Vancouver and Capital.

Household Type

Lone-parent family households had the greatest challenge with housing affordability among the

household types, with 43.1 per cent spending 30 per cent or more of their household income on shelter. Of the 35.7 per cent of these households that owned a home with a mortgage, over half (51.3%) had affordability problems. The figure was similar for the 43.1 per cent of lone-parent family households that were renters, with 52.5 per cent spending 30 per cent or more of their household income on shelter.

Couple family households without children fared best, whether the home was owned (with or without a mortgage) or rented, with only 16.8 per cent spending 30 per cent or more of their household income on housing costs. In addition, 44.9 per cent of couple families without children owned their home without a mortgage, the highest percentage among the household types. Mortgage-free family households without children were more likely to be headed by older persons.

Couple family households with children were most likely to own a home with a mortgage (60.0%) and least likely to rent (18.2%). While 23.6 per cent of these households experienced housing affordability problems overall, 28.2 per cent of owners with a mortgage and 30.3 per cent of renters spent 30 per cent or more of their household income on shelter.

Notes:

Family households are divided into two subcategories: one-family households and other family households.

A one-family household consists of a single family (e.g., a couple with or without children, a lone parent with one or more children).

Other family households are made up of two or more families occupying the same dwelling, or one family with additional persons.

A non-family household consists either of one person living alone or of two or more persons who share a dwelling, but do not constitute a family.
