

## highlights

a weekly digest of recently released British Columbia statistics

### *Wages and Salaries*

- **Wages and salaries in British Columbia rose 0.4% (seasonally adjusted) in September.** The increase was double the national average (0.2%). Wages and salaries were flat or dropped in eight of the country's twelve regions. New Brunswick (0.8%), Alberta (0.7%), Ontario (0.4%) and BC were the only provinces where wages and salaries were higher in September than in the previous month.

On a year-to-date basis, wages and salaries in the province were up 3.7% over the first nine months of 1996. This was slightly below the national average of 4.0%. Yukon (+10.0%) and Alberta (+6.7%) posted the strongest gains in the country. Wages also grew at above-average rates in Saskatchewan and Ontario (both at 4.7%). *Source: Statistics Canada*

### *Housing*

- **The cost of new housing in the province continued its downward spiral in October.** Vancouver's New Housing Price Index (NHPI) was down 3.5% from October 1996, while the NHPI in Victoria was 2.8% lower. New house prices in the province have been falling since mid-1994, and October's decline marked the 42<sup>nd</sup> straight month that prices have fallen in Victoria, and the 41<sup>st</sup> month of declining prices in the Vancouver metropolitan area. Nationally, new house prices were up 1.1%. *Source: Statistics Canada*
- **Residential MLS sales in BC increased 2.0% (seasonally adjusted) between September and October.** The volume of MLS sales was up 3.4% nationally, with Manitoba (26.4%) posting the strongest gain. *Source: Canadian Real Estate Association*

### *Motor Vehicle Sales*

- **Motor vehicle sales in the province increased 8.8% in October, relative to the same month last year.** After starting 1997 with very strong growth, sales in the province have been increasing more moderately since last May. October's increase was slightly below the national average (9.1%), which was boosted by very strong growth in Newfoundland and the three prairie provinces. Sales were up 7.1% in Ontario. *Source: Statistics Canada*

### *Bankruptcies*

- **There were 717 consumer and business bankruptcies in British Columbia in September.** This was up 43% from the same month last year, when the number of bankruptcies totalled 502. Consumer bankruptcies rose sharply (54%, to 671), continuing a steady climb that began in the spring of 1995, while business bankruptcies fell (-32%) for the second straight month (-30%). Nationally, the total number of bankruptcies was 16% higher than in September 1996. *Source: Industry Canada*
- **A recent Statistics Canada study identifying factors contributing to business bankruptcies suggests that most bankruptcies occur in small and younger firms.** These firms typically fail because of unanticipated external shocks and internal deficiencies. Almost half of the firms in Canada that go bankrupt do so primarily because of internal weaknesses, with the main reason for failure being inexperienced management. Seventy-one percent of firms fail because of poor financial planning. Marketing inadequacies were another common cause of business failure. *Source: SC, Catalogue 61-525-XPE*

### ***Did you know...?***

***In 1996, 4.2 billion litres of gasoline were purchased in BC for use in motor vehicles. On a per capita basis, that translates into 1,082 litres for every person in the province.***

### ***The Year 2000***

- **According to a survey conducted this fall, fewer than half of all Canadian firms have taken action to prepare for anticipated computer problems in the year 2000, even though more than 90% of the companies were aware that there is a potential problem.** Sixty-one percent of small firms, and 30% of medium-sized companies had taken no action to address the problem. Among large companies, most (92%) were addressing the problem in some way, but only 48% had formal plans for dealing with it. The survey estimated that fixing the Year 2000 problem could cost more than \$12 billion.

*Source: Statistics Canada*

### ***First Common-Law Unions***

- **Fifty-seven percent of Canadians entering their first union between 1990 and 1995 chose to live common-law rather than to marry.** Women were 75% more likely to enter a first common-law union if their parents had separated or divorced (before they were 15 years old) than if their parents had remained married. Those who already had a child were 50% more likely than women without children to choose a common-law union over marriage. Those who held a paid job were twice as likely to choose a common-law union as those who did not have any paid employment. Age was also an important factor: women aged 15 to 24 were 30% more likely than the next youngest cohort (those aged 25 to 34) to choose a common-law relationship for their first union. Francophones living in Quebec were also more likely than other women to be in first common-law unions.

*Source: Statistics Canada*

### ***Overtime Work***

- **In November 1995, paid workers in Canada regularly put in 6.8 million hours of overtime each week.** If this overtime had been converted into jobs of 40.5 hours per week, as many as 169,000 additional jobs might have been created in Canada, reducing the unemployment rate from 8.7% to 7.5%. This would have translated into about 16,000 additional jobs in British Columbia, with a commensurate reduction of 0.8 percentage points (to 8.0%) in the province's unemployment rate.

However, when the skills, qualifications and location of those doing overtime work were compared to the pool of unemployed workers, the potential for job creation was considerably lower, dropping to 93,000 jobs at the national level. In addition, only 5% of employees who regularly worked overtime said they would be willing to have their hours reduced for less pay. This would further decrease the potential job gains to 10,000, even with no matching of workers based on occupation or location.

*Source: SC, Catalogue 75-001-XPE*

- **Between January and September of this year, almost 2 million Canadian employees worked an average of 9.2 overtime hours each week.** More than half (53%) of these workers were not paid or otherwise compensated for any of their overtime. This was even true within the civil service. Twenty percent of men reported doing overtime work, compared to 14% of women. Men also worked more overtime hours (9.9) than women (8.1). Most of the overtimers (62%) were between the ages of 25 and 44.

*Source: SC, Catalogue 75-001-XPE*

### ***The Nation***

- **Real gross domestic product (GDP) at market prices grew 1.0% (seasonally adjusted) in the third quarter of 1997.** Consumer spending (1.3%) and business investment in plant and equipment (3.6%) continued to drive final domestic demand, which was up 1.5%. Investment by the government sector rose more moderately (1.1%) while government spending on goods and services was only marginally higher (0.2%) than in the second quarter. The balance of trade was lower (but still positive), as exports (2.4%) grew less than imports (4.6%). This release marks the first step in a process of historical revisions currently underway at Statistics Canada. National GDP estimates have been revised back to 1961 and it is expected that historical revisions to provincial GDP estimates will be released some time next year.

**Focus on BC Families: *Common-law Partnerships***

**Common-law Unions Continue to Increase Except Among the Young**

**BC STATS**

For all age groups, except the 15 to 24 year olds, the proportion of the population living common-law increased between 1991 and 1996. The highest incidence is among the 25-29 year olds, at 14 per cent and then the rate falls off steeply to only 6 per cent for the middle-aged.

This tendency for common-law relationships to become less prevalent with age is partly an inter-generation difference in attitude towards marriage, but it also reflects the young's choice to test-run living together before marrying. For example, in 1991, among the 25 to 29 year olds, 11 per cent had never married and were living common-

law. Five years later, only 8 per cent of the cohort remained in that situation.

From the chart, it may appear as though living common-law for the young is going out of fashion. However, the reverse is probably true. There has been a drop in "living-together relationships" overall, as a result of the difficult time youth are having finding well-paid secure jobs, which would enable them to set up their own households. Among the young who do live together, the proportion who opt for legal marriage status continued to drop dramatically, from 44 per cent in 1991 to 38 per cent in 1996.

**Among the Divorced & Separated,  
Common-Law Relationships Are Less Common**

BC STATS

One interesting development over the last five years, is the considerable decline in common-law relationships among the divorced and separated. This is so for both men and women. Why this has occurred could be due to women's increasing economic independence. If the conventional wisdom is true, namely that men will usually only leave a marriage if they have another relationship to go to whereas women will leave if they are able to support themselves even if it means living on their own, then the increase in the number of divorced and separated persons not living with a partner could reflect an increase in the number of separations/divorces being initiated by women.

**One in Three Women Enters  
Her Senior Years Without a Partner**

\*Partner of opposite sex.

BC STATS

The chart above shows the extent to which women more than men are on their own by the time they reach middle-age. The main reasons for this are---among men and women between the age of 40 and 64, there are 15,000 more separated/divorced women than there are men (men have a higher probability of remarrying than women) and on top of that, a considerably higher proportion of the divorced/separated men live common-law (28%) compared to the women (20%). This large divergence in living arrangements among the same-age men and women confirms the common perception that divorced and separated middle-age men marry or live with women younger than themselves.
