a weekly digest of recently released British Columbia statistics

Labour Force

- **British Columbia's unemployment rate dropped to 7.4% (seasonally adjusted) in October, its lowest level since September 1981.** However, the improvement in the jobless rate was not due to strength in the labour market. Between September and October, 14,800 people left the labour force. The ranks of the unemployed shrank by 12,200 despite a net loss of 2,600 jobs in October, suggesting that many of the people who had been looking for work in September were no longer doing so last month. The exodus from the labour force resulted in a 0.6 percentage point drop in the province's unemployment rate. *Source: Statistics Canada*
- **Canada's unemployment rate was also down in October, falling to 7.2% (seasonally adjusted).** At the national level, the decline in the rate signalled continued strength in the economy. The Canadian labour force grew for the fourth month in a row, increasing by 32,600 (+0.2%). At the same time, the number of people with jobs expanded by 79,500 (+0.5%). Unemployment rates were down in all but three provinces. Alberta (5.2%) and Manitoba (5.4%) continued to have the lowest jobless rates in the country. Since June, all but two provinces (Newfoundland and PEI) have had single-digit unemployment rates—the first time this has happened in more than two decades. *Source: Statistics Canada*
- **The number of people with jobs in BC's service sector, which employs three-quarters of the province's workers, fell 0.4% (seasonally adjusted, 3-month moving average) between September and October.** Fewer jobs in the wholesale and retail trade (-4.0%) and health care and social services (-3.3%) industry

were the main reason for the decline. However, the goods sector continued to pick up speed, with employment increasing 3.0%, marking the third month in a row that the number of jobs in this sector has risen. The agriculture (+9.9%) and resource-extracting (+8.2%) industries fared the best, but there was also strong growth in the construction industry (+4.3%). *Source: Statistics Canada*

- **In the regions, unemployment rates ranged from 6.3% (3-month moving average) in Kootenay to 10.5% in Cariboo, the only region where the jobless rate was above ten percent in October.** Kootenay's jobless rate has been falling despite declining employment, indicating that the improvement in the rate is due to people leaving the labour force. Jobless rates were also down in Vancouver Island/Coast (to 6.7%), North Coast/Nechako (to 8.9%) and Cariboo (to 10.5%), reflecting employment gains in these regions. Unemployment rates in Mainland/South-west (7.5%), Thompson/Okanagan (7.6%) and Northeast (8.5%) were all higher than in October 1998. *Source: Statistics Canada*

The Economy

- **The value of building permits issued by BC municipalities continued to fall in September, declining 19.4% (seasonally adjusted).** The decrease was due to fewer planned projects in both the residential (-12.0%) and non-residential (-27.1%) sectors. The value of planned institutional projects plunged 40.0%, posting its third straight monthly decline. Permits for commercial projects fell sharply (-29.1%), while those for industrial projects edged down 0.3%. Canadian permits also fell in September, but the decline (-1.9%) was much more moderate. *Source: Statistics Canada*

Did you know...

Now that the nights are getting longer...Canadian manufacturers shipped more than 20 million light bulbs and tubes to BC last year—just over 5 for every person living in the province.

- **Building permits in the province fell 11.4% between the second and third quarters, as the value of permits issued for both residential (-6.9%) and non-residential (-15.8%) projects declined.** BC was one of four provinces to show weakness in the third quarter (the other three were in Atlantic Canada). Canadian permits rose 2.4%, buoyed by activity in the prairies, Quebec (+7.5%) and Ontario (+3.1%). Saskatchewan (+23.9%) recorded the strongest increase.

Source: Statistics Canada

- **BC manufacturers surveyed in October had a less rosy outlook on their prospects than they did earlier in the year.** Twenty-five percent expected their production to increase in the fourth quarter, down from 29% of those surveyed in July. The percentage of manufacturers who were pessimistic (25%) was more than double that (11%) in the third quarter. Overall, the balance of opinion on production was 0.

Despite a somewhat gloomier outlook, more manufacturers expected new orders to increase (22%) than to decline (12%). However, manufacturers were happier about their inventory levels than in previous quarters. Earlier in the year, about a quarter of them thought their finished product inventory would be too high. In October, the percentage had declined to 16. Three-quarters said they expected their inventory levels to be about right. A similar number said they didn't expect to encounter any production difficulties in the fourth quarter.

Source: Statistics Canada

- **The number of existing homes sold in BC was virtually unchanged (-0.1%, seasonally adjusted) in September.** Nationally, MLS residential sales dropped 0.8% between August and September, as sales fell or were flat in most provinces. The exceptions were Saskatchewan (+3.3%), Quebec (+1.2%) and Nova Scotia (+1.2%). Although the real estate market in BC has been weak, average prices in the province continued to edge up. They were 2.3% higher this September than a year earlier. The average home sold for \$213,400 in September, 24% more than in Ontario (\$171,856), which has the country's second most expensive housing. The Canadian average was \$157,548.

Source: Canadian Real Estate Association data

Family Maintenance

- **The average current caseload of the Family Maintenance Enforcement Program is expected to reach 41,900 in 1999/00, more than double the total (19,689) in 1992/93, and 10% more than in 1998/99, when 38,084 people who were owed child support payments were enrolled in the program.** The increased caseload reflects changes to family law, which require income assistance recipients who are entitled to child support to enroll in the program. The average caseload involving debtors who lived in BC was 34,019 in 1998/99. These debtors owed \$126 million, of which \$85 million was recovered. About 35% of family maintenance orders (active cases where the debtor lived in BC) were paid in full and 54% were partly paid. No money was recovered in 11% of cases.

On the Road

- **Have you ever wondered why there seem to be so many vehicles with Saskatchewan plates on the road?** It may be because Saskatchewan residents are the most car-happy people in the country. There were 799,000 passenger cars, trucks and truck tractors registered in that province last year—one for every person aged 15 or over. Forty percent of the vehicles were trucks. Albertans (1.1 people per vehicle) were almost as likely to own a vehicle as their eastern neighbours, but they were less apt to be cruising in a truck (19%). In BC, there was one road vehicle registration for every 1.5 people who were potentially eligible to drive. The national average was 1.4. Ratios in other provinces ranged from 1.3 in both New Brunswick and PEI to 1.6 in Quebec. Trucks were most popular in Saskatchewan, Manitoba and Atlantic Canada. Twenty-seven percent of the registered vehicles in BC were trucks. The national average was 21%.

Municipal Population Estimates ♦ 1999

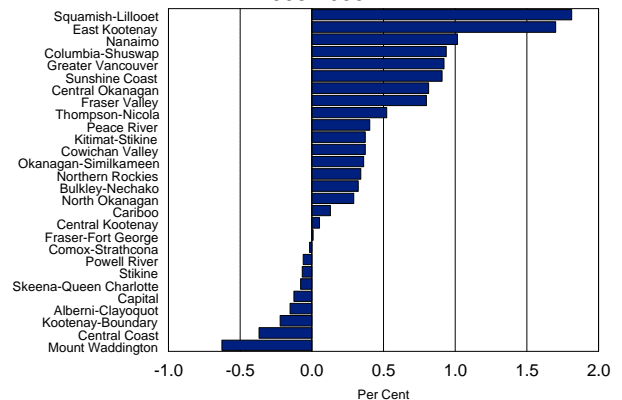

British Columbia Population Still Growing in 1999

Despite recording a significant outflow of migrants to the rest of Canada, British Columbia was still the third fastest growing province in Canada between 1998 and 1999. The population of British Columbia grew at a rate of 0.7 per cent, or 26,476 persons, between July 1, 1998 and July 1, 1999. Only Ontario (1.3 per cent) and Alberta (2.0 per cent) had higher growth rates among the provinces (although the Northwest Territories and Nunavut also had higher growth rates at 1.3 per cent and 2.4 per cent respectively). The growth was driven by a net inflow of migrants from other countries and an excess of births over deaths (natural increase).

Surprisingly, the population growth was fairly evenly distributed across the province. In the past when there were slowdowns in the resource sectors, there were large intra-provincial movements from the resource-dependent centres toward the Lower Mainland and the Greater Victoria regions. These movements within the province have generally cancelled out the movement out of these urban areas to other provinces, leaving the Lower Mainland and Greater Victoria areas with strong positive growth despite the weak growth for the province overall. This does not appear to be the case this time around. The Fraser Valley and Greater Vancouver Regional Districts recorded slightly higher than average growth rates of 0.8 percent and 0.9 per cent respectively, while the Capital Regional District, which contains Greater Victoria, actually experienced a slight decline in population of 0.1 per cent. This is

likely attributable to the fact that the inter-provincial outflows were larger than the province has experienced in the recent past.

**Population Growth by Regional District
1998-1999**

Source: BC Stats

With the exception of the Capital Regional District, the regions that experienced population declines are generally resource-dependent areas. The struggling forest sector is the driving force for much of the population decline, but poor markets for minerals and the consequent effects on the mining industry also contributed to poor population growth in some areas. For example, despite the booming oil and gas sector in the Northeast throughout 1998, population growth to that area has been tempered by the layoffs at the two coal mines in Tumbler Ridge. Gold River is another area that endured a critical loss of jobs after the pulp mill closed.

Strong growth in tourism and technology-based industries helped counteract the effects of the resource sectors in some areas. The area around Whistler continues to lead

the province in growth. The population of Whistler has more than doubled in size since 1991, and although growth is slowing as the municipality is beginning to reach the saturation point, nearby communities like Pemberton are benefiting from the spin-off effects. On Vancouver Island, the District Municipality of Tofino has posted four consecutive years of 5 per cent or greater population growth. Tofino seems to be successfully diversifying its economic base away from a high dependence on resource extraction industries. This may serve as a model to other communities currently struggling with mill and mine closures.

Other highlights from the 1999 Municipal and Regional District Estimates include:

- As was the case in the last couple of years, the total British Columbia growth rate (0.7%) is slightly higher than the rate of growth of the sum of the incorporated municipalities (0.6%). This indicates that the rural unincorporated areas in British Columbia are growing at a faster rate than the more urban incorporated areas.
- Of the 152 incorporated municipalities within British Columbia, just over half experienced an increase in population over the last year.
- Like the province as a whole, high growth areas like the Lower Mainland and the Okanagan have experienced a considerable slowdown in population expansion. Growth in Kelowna was negligible after more than a decade where annual growth rarely fell below two per cent.
- In the Capital region, population growth continues to spread outward from the core, with reasonably steady growth in

the Western Communities, but small declines in the core municipalities of Victoria, Oak Bay, Esquimalt and Saanich. The town of View Royal had the largest growth rate for municipalities with over 5,000 population (with the exception of Quesnel and Williams Lake where the growth was due to large boundary extensions).

- Population growth continues to be relatively strong in the east-central portion of the Island, with above average growth in the Nanaimo region and the Comox Valley.
- The East Kootenay region experienced surprisingly strong growth, which may be due in part to the proximity of the region to Alberta.
- Masset appears to be making a comeback, recovering from a 20 per cent reduction in population following the closure of its military base, with a 13 per cent jump in population between 1998 and 1999.

Municipal estimates are calculated by the Population Section of BC Stats through a regional estimation model that has been developed and refined over the past 19 years. This model, which uses indicators such as residential electrical connections and Old Age Security data, has enabled BC Stats to produce relatively accurate population estimates without the high cost of conducting a census.

Knowledge of population growth and where it occurs are vital to the planning process. For this reason the Municipal and Regional District Estimates are an important tool for the provincial and local governments in assessing current and future community needs.

The population estimates for 1996 to 1999 (as well as the estimates for 1976 to 1995) are available on the BC Stats web site: <http://www.bcstats.gov.bc.ca>

Government of British Columbia.

Notes:

All figures correspond to municipal boundaries as of July 1st of the year stated.
All figures are as of July 1st of the year stated.

C = City, T = Town, VL = Village, DM = District Municipality,
IGD = Indian Government District.

* Denotes a boundary change between 1996 and 1999.

** Sechelt Indian Government District is split between Sunshine Coast
and Powell River Regional Districts.

† 1996 figures include an estimate of net census undercount.

BC Population Still Growing in 1999

Estimates of population as of July 1, 1999 for British Columbia and its regional districts and municipalities were released this week.

Despite showing a significant outflow of population between 1998 and 1999, British Columbia recorded the third fastest rate of growth (0.7%) among the provinces after Alberta and Ontario.

The Lower Mainland's population grew only slightly faster than the province overall while the Victoria area registered a very small decline.

The area around Whistler led population growth, with Whistler itself doubling in size since 1991. Although Whistler's rate of growth slowed somewhat, nearby communities benefited from the spillover of Whistler's saturation. Tofino, on Vancouver Island, also saw strong growth as this area diversifies its economic base away from resource industries.

For details at the municipal and regional district level, see the previous section of today's *Infoline*. For more history on these and other areas, visit our web site:

<http://www.bcstats.gov.bc.ca>

and click on the link.
