

- **Inflation rate rises to 1.9%, boosted by higher prices for most commodities**
- **Retail sales advance 0.3%, but BC continues to lag behind the national average**
- **Children born in BC have highest life expectancy in the country**

Prices

- **British Columbia's year-over-year inflation rate (as measured by the change in the all-items Consumer Price Index) rose to 1.9% in August.** Consumer prices were up more or less across the board. Clothing and footwear (-1.0%) was the only exception. The cost of health and personal care products and services edged up (+0.4%), but increases in other categories were significantly higher. Consumers paid more for household services, furnishings and supplies (+1.2%), shelter (+1.8%), food (+2.0%), recreation, education and reading (+2.0%) and alcohol and tobacco products (+4.9%).

Energy prices began to climb again (+8.1%) in August, after showing signs of stabilizing earlier in the summer. The cost of piped gas (+16.0%), fuel oil (+13.3%) and gasoline (+12.2%) shot up at the end of the summer, pushing up the indexes for transportation and shelter costs. Excluding energy, BC's inflation rate would have been 1.4% in August. The CPI also continues to show the effect of higher tobacco prices, which have increased more than 50% since 1992. Vancouver's inflation rate was 1.8% in August. Prices in Victoria rose 1.9%. *Source: Statistics Canada*

- **For the first time in more than a year, BC's inflation rate was about the same as the Canadian average (+2.0%).** Residents of Manitoba (+0.9%), Ontario (+1.7%) and Quebec (+1.8%) saw smaller increases in the overall price level, as did those in the Territories. Inflation rates in the rest of Canada ranged from 1.9% in Saskatchewan to 4.0% in Alberta.

The Canadian inflation rate was also boosted by energy costs (+7.6%). However, the main pressure on energy prices at the national level came from piped gas (+51.4%). Drivers faced much more modest increases (+6.3%) at the pump,

and households paid 10.5% more for fuel oil. Auto insurance premiums (+21.8%, triple BC's 7.3% increase) also drove the advance in the Canadian CPI. *Source: Statistics Canada*

The Economy

- **Sales by retailers in the province continued to advance (+0.3%, seasonally adjusted) in July, boosted by purchases of big-ticket items such as vehicles and furniture.** Gas station and drug store sales were also strong in July, but other retailers had a slow month. Canadian retailers as a whole did better than their counterparts in this province, as they have for most of the last eight months. Sales were up 0.8% nationally, with strong gains recorded in Alberta (+2.1%), Ontario (+1.1%) and most of Atlantic Canada.

Source: Statistics Canada

- **Production at BC sawmills and planing mills was 1.9% lower this July than in the same month last year.** Both Coastal (-7.0%) and Interior (-0.6%) mills cut back their output. However, shipments rose 4.4%. Canadian lumber production edged down 0.3%. Mills in BC, Ontario (-2.1%), New Brunswick (-3.9%) and Nova Scotia (-12.0%) all slowed down their production.

Source: SC, Catalogue 35-003-XIB

- **Restaurant, caterer and tavern receipts in the province posted their strongest monthly gain (+2.8%, seasonally adjusted) since late last year in July.** Food services and drinking establishments both took in 2.8% more earnings than in June. Canadian receipts rose a more modest 0.7%.

High-Speed Access to the Internet

- **Sixty-one percent of British Columbia households who regularly use the Internet subscribe to high-speed (broadband) services, more than in any other region.** Nationally, less than half

Did you know...

Sixty-five percent of BC women aged 50 to 69 in 2000/01 reported having had a mammogram in the past two years. The national average was 70%.

(49%) of regular Internet users use broadband services. Usage rates are lowest in Atlantic Canada (39%). Eighty-six percent of Canadians live in communities where broadband access by cable or DSL networks is available.

Source: SC, Catalogue 56F0004MIE

- **More than 3.1 million residential and business subscribers in Canada used broadband Internet services in June 2002.** South Korea was the only OECD country where per capita usage was higher (19 subscribers for every 100 inhabitants, compared to 10 in Canada). The average usage rate for all OECD countries was 4. In the US, there were 6 broadband subscribers for every 100 inhabitants.

Source: SC, Catalogue 56F0004MIE

Life Expectancy at Birth

- **Children born in BC during 2001 could expect to live longer (80.6 years) than their compatriots in other parts of the country.** Life expectancy was 83.1 years for girls, and 78.1 for boys born in BC in 2001. Nationally, life expectancy at birth reached a record high of 79.7. After BC, Ontario (79.9) and Alberta (79.7) had the highest life expectancies, while children born in Nunavut (70.4) had the shortest life expectancy.

Source: SC, The Daily

On the Move

- **Canadians were more mobile in 2002 than in the previous year, with 1.65 million of them changing their residence during the twelve-month period ending July 1 (up 9% from 1.51 million in 2000/01).** A significant number (290,000) moved to another province. Among census metropolitan areas, Toronto (with a net gain of 105,221 people, or 21.7 per 1,000 population) and Calgary (+17,208, or 17.7 per 1,000) stand out as the most popular destinations, followed by Oshawa and Vancouver, which gained 27,645 migrants (13.4 per 1,000). Victoria's population increased by 1,634 people (5.0 per 1,000) as a result of net migration.

University Grads: The Earnings Gap

- **A study of BC university graduates suggests that those in applied fields (such as engineering or commerce) earn more than their counterparts in sciences, humanities and social**

sciences. Ten years after graduation, men who completed their degree in commerce or engineering between 1984 and 1986 earned an average of \$69,286 annually, compared to \$55,028 for those who studied science, social sciences, or humanities. However, the size of the gap does not appear to be increasing.

Source: SC, The Daily

Aboriginals Living Off Reserve

- **Aboriginals living off reserve face ongoing challenges, according to the 2001 Aboriginal Peoples Survey.** Although most (56%) Aboriginals living off reserve said their health was excellent or very good, the percentage was considerably lower than for the Canadian population as a whole (65%, age-standardized). Nearly half (45%) of Aboriginal adults reported the presence of one or more chronic conditions. Arthritis or rheumatism (19%, compared to 11% for all Canadian adults), high blood pressure (12%, compared to 9%) and asthma (12%, compared to 10%) were the most common problems. Diabetes rates were also considerably higher (8%, compared to 3%) than the Canadian average. Inuit living in the Arctic also cited concerns about water quality, with just over a third (34%) reporting contamination at some point during the year.

Source: SC, The Daily

The Nation

- **Canada's national net worth (the value of all non-financial assets less foreign liabilities) increased to \$3.9 trillion, or \$121,900 per person, at the end of the second quarter.** The increase came as the value of Canadian assets rose faster than our growing foreign debt.
- **Canada's international investment position deteriorated in the second quarter, as a strong Canadian dollar depressed the value of Canadian assets abroad.** The nation's net liability to foreign residents reached a three-year high of \$227.4 billion at the end of June. Almost all (\$61.0 billion) of the \$61.8 billion decline in the value of international assets (most of which are in US dollars) was due to a soaring loonie.

Regional Outlook—North Coast

If only a single piece of information regarding the economic future of a region were available, the first choice of most planners would likely be accurate population forecasts. Nothing is as fundamental to economic activity than the size and make up of the population. To this end, BC Stats maintains a program of population projections for regions within the province.

The method of projecting population requires separate forecasts of each of the components of population change, namely fertility, mortality and migration. We monitor and weigh planned or foreseen economic events that may give rise to in-migration or out-migration of population. An analysis of these events and their likelihood form the basis for a set of migration assumptions for the demographic model. When the collections of such information are organized by region and theme it is possible to build a 'bottom-up' picture of events that may shape a region's future. The report that follows is the second in a series of regional outlooks.

Overview

Boom and bust cycles have influenced activity in the North Coast Region in the past, and growth appears to be on the horizon. Off shore oil, coal, and other resources, many destined to China, as well as increasing demand for electrical power for North American markets, will likely influence activity in the region in the short-term and into the future.

Demographics

Although a portion of mainland North Coast is exposed to the Pacific Ocean, the area north of parallel 54o 40 lays inland behind the Alaskan panhandle, thereby concentrating human population and activity in the southern portion of the region. Between 1996 and 2001, the population dropped by 8.5% from 68,413 to 62,570 as a result of out-migration. Most of the movers were young working families. As the population aged, fertility declined. This, coupled with the fact that younger persons and families moved out of the region, resulted in a drop in the number of people under the age of 45, while those over 65 increased. Consequently, enrolment in schools in the region has been dropping, resulting in many school closures and teacher layoffs. Housing prices have also declined, in some cases more than 50% since the highs of 1996. As people moved out, the vacancy rate has risen; in Terrace the vacancy rate rose to over 40%. Due to the population drop, electoral jurisdictions are being adjusted. The federal electoral boundaries are being changed to increase the riding size, and as well Regional District representation is being adjusted.

However, as the overall population declined, the aboriginal population grew. In Terrace, those identifying themselves as aboriginal grew by 37 per cent between 1996 and 2001 to over 3,000 while the numbers dropped slightly in Prince Rupert. Higher than provincial average fertility rates combined with some in-migration, particularly from Vancouver, have contributed to the growth. This trend in Aboriginal population has helped to reduce the impacts of overall population decline in the region, benefiting businesses especially in the Terrace area.

North Coast Development Region

Employment

Unemployment for the region has been over 10% since 2000, and is currently around 10.9% having been as high as 16.1% in May 2002. Economic difficulties began in 1996 resulting in out-migration particularly of working families, with many moving to Alberta. For some people, an alternative to moving has been retraining. Unfortunately, the federal job re-training program, although expanded, could not accommodate the growing number of people interested in upgrading skills leading to 160 applicants being rejected in September 2002.

The Nisga'a land agreement has been cited as having improved employment as well as bolstering business in the area. Infrastructure development is currently a priority in the Nass Valley. The largest export from Nisga'a in 2002 was pine mushrooms. Nearly 30,000 kg were harvested with a value of over \$1.3 million.

Transportation

There was a decrease of 12% in port traffic out of Prince Rupert for the fourth quarter of 2002 relative to 2001. This was primarily due to the closure of the Quintette coal mine in the Peace River area but also because ocean carrier services for some pulp customers has decreased. Coal exports should increase with the opening of the new Wolverine and Brazion mines in Northeastern BC. Western grain shipments have suffered as production dropped due to drought; however, grain production in the Peace Region was good in 2002 and a strike at the Vancouver terminals meant more volume for Prince Rupert.

Efforts are being made to develop a container port so that northern products do not have to go through Vancouver to get to international markets. An increasing number of commodities now move via containers including grain and pulp. In addition to Prince Rupert, Kitimat is also interested in attracting a container port. In an attempt to make BC ports more competitive with U.S. ports, proposals are being made to reduce relatively high industrial taxes set by municipal governments.

Population Estimates, North Coast DR, 1976–2002

Other potential port activity may include a tank farm in Prince Rupert to handle 400,000 barrels of bitumen a day delivered via a pipeline from Northern Alberta. When completed, the 30 inch, 1,250 km project proposed by Enbridge Pipelines Inc. is estimated to cost approximately \$1.5 billion. A new resource road to the Kemess mine, 450 km north west of Prince George, is also being considered. Over \$50 million in roads continue to be built throughout the region. In early December 2002, the more than 300 residents of Kincolith were connected to the road network for the first time. The city of Prince Rupert has been actively promoting \$1.3 million in bridge work to connect local communities.

Fisheries

Only a few fin fish farms are located along the coast, all near Jackson Passage, and as many shell fish farms are more widely dispersed. Due to agreements with the UN on fish stock conservation, the commercial sockeye catch is to be lowered to 40 per cent below its traditional level for the next 20 years. As well, the federal government is planning to reduce funding to

hatcheries for the Pacific Region by approximately \$21 million. In the meantime, plans are being made to increase the number of fish farms in the region. Other economic activities being actively promoted include seal hunting. The local member of parliament has asked Ottawa to allow a similar hunt as that taking place on the Atlantic coast. There, 350,000 seals are killed annually.

Forestry

The Annual Allowable Cut (AAC) continues to be reduced. The Kispiox timber supply area AAC has dropped to 977,000 cubic meters, down 11% as of January 1, 2003. The North Coast TSA cut has been lowered to 546,624 cubic meters as of July 3, 2002, down 5%, while the Kalum (July 15, 2003) and Queen Charlotte TSAs (April 30, 2003) remain unchanged. Talks continue between the Haida Nation and the Ministry of Forests on whether to increase the AAC for part of Moresby Island by 12%. As a result of the dropping AAC and international trade restriction, forestry activity has been slowing. However, the growing demand for pulp, particularly in China, has resulted in an

Labour force estimates, North Coast/Nechako Economic Region, 1995 to 2002

	1995	1996	1997	1998	1999	2000	2001	2002

Employment rate	65.9	68.4	67.6	62.4	62.2	63.7	63.8	62.3

increase in prices since the lows of 2002. At Eurocan, in Kitimat, the Communications Energy and Paperworkers local 298 went on strike in May. Consequently, 60 employees of West Fraser’s sawmill in Terrace were temporarily laid off in June due to a lack of fibre.

Rising pulp prices may provide New Skeena, formerly Skeena Cellulose, an improved opportunity to restart operations at its Watson Island pulp mill. The owners, NWBC Timber and Pulp Ltd., have been trying to reduce costs and acquire capital before reopening the mill. Workers have been offered a 20% wage reduction as well as reduced benefits but have been reluctant to reach a deal. Recently, the citizens of Prince Rupert voted 70% in favour of spending \$20 million to buy the pulp mill given that certain conditions are met. In order to help stimulate logging activity in the region, where timber quality is poor and logging conditions are difficult and expensive, an order in council was made available to all tenure holders in the North Coast, Kalum and Kispiox Forest Districts allowing 35% of the logs to be exported.

Energy

Alcan Aluminium was ordered to honour its commitment to pay \$100 million to BC Hydro in January, even though Enron, due to bankruptcy, could not pay Alcan for the electricity generated in Kitimat. With the price of aluminium not expected to rise in the near future, particularly given the increased output from China and low world GDP, Alcan is looking to increase power sales. The \$50/mw offered by BC Hydro makes electrical sales more attractive than producing aluminium. Plans have been proposed to upgrade the Kitimat smelter, increasing capacity, reducing the work force, and allowing more power to be sold. Estimates have been made that the 6,000 direct, indirect, and induced jobs could drop below 3,000. Local town councils have proposed to apply taxes if Alcan shifts its wealth generating activity; the power generating facilities are not presently taxed. One of the difficulties in levying taxes is that some of the water ways that may be used to generate saleable electricity now belong to Alcan having been signed over in the 1997 Kemano cancellation settlement. Alcan may soon acquire Pechiney SA, the company responsible for improving productivity at its multibillion-dollar smelter in Alma, Quebec. This move, along with

the present conditions, would appear to increase the likelihood of changes to the aluminium facilities.

In order to meet increasing demand for electrical energy, BC Hydro has been actively seeking independent power producers. A \$15 million, 160 megawatt wood residue burning facility at Eurocan in Kitimat has been approved. In March, Nai Kun Wind Development Inc. received an exploration permit to test the ground under the water near Masset, between Haida Gwaii and Prince Rupert. When built, the \$1000 million wind farm would generate 700 megawatts of electricity without the 800,000 tons per year of emissions that would result from hydro carbon burning. Construction could begin in 2005. In April, the Premier Power Corporation received approval from BC Hydro to have the Long Lake Hydro Project near Stewart provide 83.2 mw of electricity to the grid. The Forrest Kerr Water Power Project has been accepted for consideration as a green power provider. This 'run of the river' facility would have a 100 mw capacity, and generate 633 gigawatt-hours annually. Other run of the river projects seeking approval are the dormant Anyox and Kitsault dams near Alice Arm.

Off-shore oil

The moratorium over off-shore drilling was imposed in the 1970's due to the rising concerns over possible adverse effects on the environment. Tests done in the area show that there are potentially large reserves off-shore. The resumption of drilling could result in increased economic activity and population in west coast communities from Prince Rupert to Port Renfrew. However, before the go ahead is given, issues of jurisdiction between the provincial and federal governments must be addressed as well as Aboriginal land claims. A \$6 million federal study is being conducted to examine environmental impacts and the regulatory regime. As well, the University of

Northern BC has developed a program to organize a database of information about oil and gas development that is accessible to the public and to create a community liaison network. According to the provincial government's Scientific Review Panel "there is no inherent or fundamental inadequacy of the science of technology, properly applied in an appropriate regulatory framework, to justify retention of the BC moratorium" on off-shore oil and gas drilling. It is estimated that the moratorium will not be lifted for five years. A report co-produced by the Maritime Awards Society of Canada and BCIT (March 2001) indicates the value of off-shore reserves at 150,000 million barrels of oil and 6 trillion cubic feet of natural gas worth tens of billions of dollars. Recently, a legal team has been put together to address potential issues and suggestions to set up marine parks in the area have been put forward.

Summary

Increasing demand for pulp will help that industry, even though forestry activity will likely continue to slow as the AAC is reduced and world wood supply remains high. Reductions in wild fish quotas will likely be replaced by increases in fin fish farms but not until environmental issues have been addressed. Increasing energy demands worldwide will likely increase exports of electricity as well as oil, gas, and coal through, and out of, the region. Therefore, Prince Rupert's port activity should increase marginally in the long term after continued declines in the short term. New energy generation facilities will likely result in increased construction activity mitigating some of the out-migration due to the current weakness in the resource sector. As a result, the overall population should continue to decline for the short term, although at a reduced rate, with an increase expected to begin in 2005-2006.
