

- Year-over-year inflation rate drops to -0.7% in June as energy costs plummet
- Manufacturing shipments slip again in May, but motor vehicle sales rev up
- Investment in non-residential buildings down 5.2% in second quarter

## Prices

- British Columbia's year-over-year inflation rate dropped to -0.7% in June as plummeting energy prices (-17.4%) pushed down the Consumer Price Index (CPI). Excluding energy, the province's inflation rate would have been 1.1%.

Shelter (-2.2%) and transportation (-6.8%) costs were most affected by falling fuel prices. Motorists spent 22.4% less to fill up their tanks, while homeowners saw even bigger decreases (-34.9%) in the cost of oil & other fuel. Travellers were also impacted, with air, ferry, bus and other intercity transportation fares dropping 1.1%.

Renters paid an average of 1.7% more for housing, but the cost of owned accommodation declined 2.5%, reflecting lower prices for fuel, electricity and natural gas.

Consumers forked over 4.1% more for food, with grocery bills rising 4.8%, and restaurant meals costing 2.6% more than in June 2008. The increasing cost of food was reflected in hikes in the index for meat, fish, bakery & cereal products and fresh fruit and veggies.

In Victoria, consumer prices down 0.4% over June of last year, while Vancouver's inflation rate was -0.5%.

*Data Source: Statistics Canada*

- The Canadian inflation rate (-0.3%) was only marginally higher than BC's and marked the first 12-month decline in the CPI since November of 1994. Nationally, energy prices dropped 19.0%, while the cost of other goods and services was up 2.1%. Among the provinces, inflation rates ranged from -1.6% in Alberta to +1.0% in Saskatchewan.

*Data Source: Statistics Canada*

## The Economy

- Shipments of goods manufactured in BC slipped (-3.8%, *seasonally adjusted*) to \$2.6 billion in May adding to the 1.6% decrease recorded in April. Shipments of durable goods continued to decline (-3.0%) as falling sales by producers of wood (-3.4%), machinery (-5.1%) and primary metal products (-5.3%) offset increases in the non-metallic mineral (+3.6%) and fabricated metal (+1.1%) industries. Non-durable shipments also fared poorly (-4.5%), mainly due to weak sales by manufacturers of paper (-11.1%) and food (-1.5%) products.

Factory sales for Canadian manufacturers (-6.0%) were also down in May, dropping to the lowest level since November 1998. Most of the decline was attributable to plant shut-downs in the motor vehicle and primary metal industries. Sales were up sharply in Newfoundland (+26.7%), but many other provinces posted decreases, ranging from -0.6% in PEI to -9.1% in Quebec.

*Data Source: Statistics Canada*

- Investment in non-residential building construction in British Columbia slipped 5.2% (*seasonally adjusted*) in the second quarter. Spending on commercial buildings plunged (-7.0%), but investment was also lower in the institutional (-1.9%) sector. Meanwhile, industrial construction activity was up 1.6%. Spending on non-residential building construction in Victoria (+12.8%) was significantly higher than in the first quarter, but Abbotsford-Mission (-13.4%), Vancouver (-8.2%) and Kelowna (-1.8%) saw declines.

## Did you know...

Amidst the economic downturn, nearly a quarter (23%) of employees in Western Canada report experiencing decreased loyalty to their employer. *Source: Ipsos Reid*

Nationally, all but two provinces experienced a decline in non-residential building activity, and Canadian spending was off 2.8%.

*Data Source: Statistics Canada*

- **New motor vehicle sales in BC revved up (+1.6%) in May, building on a solid increase in vehicles sold in April (+4.7%).** Vehicle sales in the province have been on the rise since March. Prior to this, sales had been on a downward trend since early 2008.

Canada-wide, sales of new motor vehicles advanced slightly (+1.0%) in May. Canadian consumers bought more passenger vehicles from North America (+1.4%), but put the brakes on purchases of overseas models (-2.4%).

*Data Source: Statistics Canada*

### Tourism

- **Visitor entries to the province were off 0.1% (seasonally adjusted) in May, marking the third time since January that entries have declined.** Although visits from the US made notable strides (+1.7%), entries from overseas markets dropped off significantly (-6.0%), due to slowdowns in visits from Asia (-7.5%), Europe (-4.4%) and other countries (-5.6%).

*Data Source: Statistics Canada*

### Education

- **British Columbia's universities bucked a national trend by recording the strongest increase in enrolment between 2002/03 and 2007/08.** In total, 110,190 students were registered at BC universities in 2007/08, up an impressive 32.8% from five years prior. The number of full-time students enrolled in the province's institutions was 29.7% higher, reflecting a jump from 61,965 enrolled in 2002/03 to 80,349 in 2007/08. Part-time enrolment rose even more, with the province's universities recording a whopping 42.1% increase in enrolment over the five-year period.

*Data Source: Statistics Canada*

- **Nationally, 1,066,353 students were enrolled in Canadian universities in 2007/08, substantially more (+13.9%) than in 2002/2003.** With the exception of Nova Scotia (-1.1%)

and New Brunswick (-3.9%), all provinces saw the number of students rise over this period, with increases ranging from a modest 2.3% in Newfoundland to 32.8% in BC. Ontario (+23.0%) recorded a surge comparable to that seen in BC, and some other provinces also saw double-digit expansion. Full-time student enrolment was up 17.6% in Canada, with most provinces experiencing growth. Meanwhile, the nation saw a more moderate increase of 4.2% in part-time enrolment at its universities. Overall, enrolment of female students (+14.0%) was up slightly more than that of males (+13.7%). *Data Source: Statistics Canada*

- **The number of Canadian university students receiving bachelor's degrees climbed to a record 175,395 in 2007 (+30.9% from 2002).** At the same time, 34,791 students obtained a master's degree (+32.2% from 2002), and 4,827 (+29.4%) were awarded doctorates.

The number of women graduating from universities continues to increase at a faster rate than that of men, but more students of both sexes are pursuing a university education. Between 2002 and 2007, the number of women who received a university degree, diploma or certificate increased 31.9%, to 146,682, while the number of male graduates climbed 26.1%, to 94,830.

*Data Source: Statistics Canada*

### The Nation

- **Canada's composite leading index fell 0.1% in June, duplicating the loss seen in the previous month (-0.1% in May).** Weakness in the number of new orders received by manufacturers and slowed consumer spending weighed heavily on the index.

## Employment Income in British Columbia, 2005

### Median Employment Income...

According to the 2006 Census, BC's median employment income<sup>1</sup> for those who worked full year, full time in 2005 was \$42,230, the sixth highest in the country, and above the national figure of \$41,401. The median is the point at which exactly half of the incomes are higher and the other half are lower.

The highest median employment incomes were seen in northern Canada, led by the Northwest Territories (\$60,119), followed by Nunavut (\$58,088) and the Yukon Territory (\$49,787). Employment incomes in Ontario (\$44,748) and Alberta (\$43,964) were also higher than in BC. The lowest median employment incomes were in Prince Edward Island (\$34,140), New Brunswick (\$35,288) and Saskatchewan (\$35,948).

<sup>1</sup> Employment income is comprised of wages & salaries, net income from a non-farm unincorporated business and/or professional practice, and/or net farm self-employment income. Taxable benefits, research grants and royalties are included.

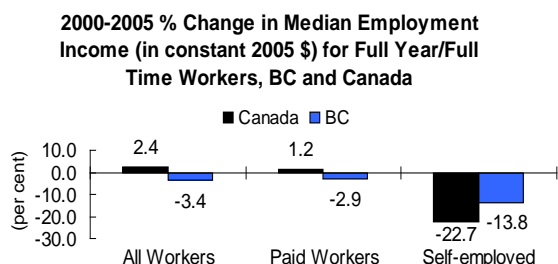

### ...by Class of Worker

Full year, full time paid workers in Canada earned more than twice as much in 2005 than those who were self-employed (\$42,485 versus \$20,792). However, there was much variation among the provinces and territories. The self-employed in BC had the third highest median employment income (\$23,266), after the Northwest Territories (\$37,135) and the Yukon Territory (\$30,464). Paid workers in Saskatchewan took home more than three times the earnings of their self-employed counterparts (\$38,687 compared to \$12,175).

Employment incomes in BC have not kept pace with the rest of the country. When compared to five years ago (2001 Census), median employment income in BC dropped 3.4% between 2000 and 2005 (in constant 2005 dollars), while for Canada as a whole it rose 2.4%. Quebec was the only other province to see a decline (-0.3%). When looking at full year, full time paid workers only, BC had by far the largest decline in median earnings (-2.9%). Along with BC, only the Yukon Territory (-0.6%) and Quebec (-0.4%) showed declines in the earnings of their paid workers. Nationally, the median earnings of paid workers rose 1.2% from five years ago.

The median earnings of the self-employed have been hit hard over the past five years, with a dramatic drop of 22.7% in full year, full time earnings between 2000 and 2005 (in constant 2005 dollars) for Canada as a whole. Only the Yukon Territory showed a positive change (+11.1%) in self-employment median earnings compared to five years ago. (There is no data on self-employment earnings for Nunavut.) In BC, the median earnings of the self-employed dropped 13.8% between 2000 and 2005. The Northwest Ter-

ritories (-3.3%) and Alberta (-10.3%) had smaller declines than BC, but all the other provinces showed significant declines in self-employment median earnings from five years ago.

Source: Statistics Canada, 2006 Census

### ...by Age and Work Activity

When looking at age groups and work activity, the highest median employment incomes were seen for those aged 45 to 54, although this age group lost 3.6% of their earnings between 2000 and 2005 (in constant 2005 dollars). The youngest workers (aged 15-19) made the most gains, increasing their median employment income by 19% between 2000 and 2005. However, these gains were attributable to those working less than full year, full time (+10.9%). Young people who worked full year, full time lost 6.3% of their earnings, the biggest drop of all the age groups who worked full year, full time. Older workers (those aged 55 and over) who worked less than full year, full time experienced the biggest declines in their median employment incomes over the last five years.

### ...by Gender

In 2005, the median employment income of women working full year, full time in BC was 76.4% of that of their male counterparts, a one percentage point improvement over 2000 (75.4%). Men lost 2.4% of their earnings between 2000 and 2005 (in constant 2005 dollars), while earnings for women dropped 1.1%.

**Median Employment Income for Men and Women Working Full Year/Full Time (constant 2005 \$), BC**

	2000	2005	2000-2005 % change
Men	\$49,239	\$48,070	-2.4
Women	\$37,129	\$36,739	-1.1
<b>Women as a % of Men</b>	<b>75.4</b>	<b>76.4</b>	

Source: Statistics Canada, 2006 Census

### ...in BC's Urban Centres

Among BC's urban centres<sup>2</sup>, the Census Agglomeration (CA) of Kitimat had by far the highest median employment incomes in 2005 for both men (\$75,609) and women (\$42,066) who worked full year, full time. Male workers in Kitimat (CA) also saw their median employment income rise 5.9% between 2000 and 2005 (in 2005 constant dollars), the highest five-year increase among the urban centres. Other centres with high 2005 median employment incomes for men working full year, full time were the Census Agglomerations of Fort St. John (\$58,374), Prince George (\$57,160) and Quesnel (\$56,585). Along with Kitimat (CA), the highest full year, full time earnings for women were seen in the Census Metropolitan Areas (CMA) of Victoria (\$38,711), and Vancouver (\$38,637), and the Census Agglomerations of Prince Rupert (\$36,692) and Prince George (\$36,686).

<sup>2</sup> Urban centre geography can be found at: <http://www.statcan.gc.ca/pub/12-571-x/12-571-x2006001-eng.pdf>

The lowest median employment earnings for full year, full time workers were seen in the Census Agglomerations of Penticton (\$36,369), Nanaimo (\$38,486) and Vernon (\$38,794) and the Census Metropolitan Area of Kelowna (\$38,832). Men experienced bigger decreases in median earnings between 2000 and 2005 than women, with only Fort St. John (CA) showing positive five-year gains for both men and women.

### ...by Employment Income Groups

More than one quarter (26%) of British Columbians had an employment income of less than \$10,000 in 2005, above the national figure of 24.9 per cent. Among the provinces, Alberta had the smallest percentage (22.6%) of workers in the under-\$10,000 category, but the Northwest Territories (18.9%) and the Yukon Territory (20%) both had lower percentages.

When looking at those in the under-\$20,000 employment income group, BC (41.8%) is one of 9 provinces/territories above the national figure (40.6%). More than half of the workers in Newfoundland & Labrador (52.7%) and Prince Edward Island (51.0%) took home less than \$20,000 in 2005. The Northwest Territories (30.3%), the Yukon Territory (34.3%) and the provinces of Alberta (37.5%) and Ontario (38.7%) had the smallest percentages of workers in this category.

**Per cent of Workers with Employment Income under \$20,000 in 2005**

Source: Statistics Canada, 2006 Census

At the other end of the scale, 7.3 per cent of BC's workers took home \$80,000 or more in earnings in 2005, less than the national figure of 7.9 per cent. The province of Alberta is again the standout, with 11.2 per cent of its workers in the \$80,000-plus category. High earners were also found in the Yukon Territory (8.6%) and the province of Ontario (9.5%), but Nunavut (15.2%) and the Northwest Territories (17.8%) were in a class by themselves.

**Table 1: Median<sup>1</sup> Employment Income in 2000 and 2005 (in constant 2005 dollars), by Class of Worker, for the Population 15 Years and Over who Worked Full Year/Full Time<sup>2</sup>, Canada and the Provinces and Territories (2006 Census)**

Nunavut	50,542	58,088	14.9	50,644	59,483	17.5	-	-	-

<sup>1</sup> The median income of recipients is that amount which divides their income size distribution into two halves, i.e., the incomes of one half of individuals are below the median, while those of the other half are above the median. This is different than the average (or arithmetic mean) which can be skewed by outliers (extremely high incomes).

<sup>2</sup> This analysis is based on full year, full time workers with employment income.

<sup>1</sup> The median income of recipients is that amount which divides their income size distribution into two halves, i.e., the incomes of one half of individuals are below the median, while those of the other half are above the median. This is different than the average (or arithmetic mean) which can be skewed by outliers (i.e. extremely high incomes).

<sup>2</sup> This analysis is based on full year, full time workers with employment income.

<sup>3</sup> Urban centres are Census Metropolitan Areas and Census Agglomerations, which are larger than their municipal boundaries. Urban geography can be found at: <http://www.statcan.gc.ca/pub/12-571-x/12-571-x2006001-eng.pdf>

## Labour Market Outcomes of Young British Columbians

The youth of today represent British Columbia's labour market future. Looking at how they engage in the labour market today provides a window to show how they will participate as adults. Labour Market Outcomes of Young British Columbians: Evidence from the 2006 Census provides a snapshot of young British Columbians (ages 15-29) that links their characteristics, such as education levels, fields of study, and gender, to their labour market outcomes.

[www.bcstats.gov.bc.ca/data/iss/lmi/lmoyoung.pdf](http://www.bcstats.gov.bc.ca/data/iss/lmi/lmoyoung.pdf)

## Statistical Profiles of Aboriginal Peoples

These profiles provide comparisons of the socio-economic conditions of the Aboriginal populations as well as profiles of Aboriginal groups such as First Nations, Métis, and Status Indians using data available from the 2006 Census. These profiles provide a range of data with particular focus on education and labour market issues.

[www.bcstats.gov.bc.ca/data/cen01/abor/ap\\_main.asp](http://www.bcstats.gov.bc.ca/data/cen01/abor/ap_main.asp)

## Socio-Economic Profiles

Revisions for 2008 now available. The profiles consist of charts and tables for the 26 Regional Districts, 86 Local Health Areas, 16 Health Service Delivery Areas, 5 Health Authorities, 8 Development Regions, and 15 College Regions within the Province of British Columbia. Also included are the special geographies of the Georgia, Fraser, and Columbia Basins.
